New Italian Language Culture

The release of Atlantic Global's latest language pack this month further enhances Atlantic Global OnDemand's status as a multi-lingual system for timesheet, expense management, project management and project portfolio management. Atlantic Global have released the Italian Language Pack to reflect growing user demand and is now available to subscribers.

For access to the Italian language culture please contact your Account Manager directly.

New Reporting Improvements

When modifying the filters for Reports which include Keyword Custom Fields, a pick list of the available Keywords appears in a drop-down list for the Default Value, saving time and effort in tailoring filters for particular requirements.

Every time a report is run, any changes to the dataview are now reflected immediately, ensuring confidence that any changes to a Report Template take effect immediately, once loaded.

Timesheet and Expenses Reports now have Locked (Yes/No) included as an option in Filters and two new 'Is Locked' Report Templates has been created for both Timesheet and Expenses. This provides a quick way to isolate locked Timesheet and Expenses transactional records, saving time and effort for the administrator.

Delivery Custom Fields have been added to the Deliverable dataviews, providing consistency and flexibility.

Improved Resource Availability Search

The Search function for Resource Availability now shows data by month or week based on where the search was called from, meaning Resource Managers will benefit from a more intuitive user interface and more flexible filtering options when searching for the right people for the right assignments.

Improved Cost & Charge Rates

Both Cost Rates and Charge Rates can now be entered with up to six decimal places, providing greater accuracy when representing Resource Costs which aren't defined hourly, such as annual salaries or day rates.

Improvements to Project Profiling

When replacing or merging profile data from another plan or template plan, the system defaults to including either Open Periods or All Periods, based on the last time you performed the action.

This saves time and effort for the project manager when a setting up a number of new projects from template plans or when re-planning projects regularly.

New 'Quick Start Wizard' (Timesheet Configuration Guide)

A new 'Quick Start Wizard' for configuring Timesheets is available from the Configuration Dashboard providing an intuitive 'walk-through' to setting up the Timesheet system to ensure it is up and running as soon as possible and to gain a quick return-on-investment.
